
From the Bone and Joint Surgery Association

Dear Colleagues,

As the Bone and Joint Surgery Association, we remain firmly committed to our founding mission of supporting scientific advancement in the field of orthopedics and traumatology, strengthening professional education, and enhancing collaboration both nationally and internationally.

In this context, the National Congress of Bone and Joint Surgery, held in April 2025, successfully reflected the vision of our Association with its high scientific standards, broad participation, and well-organized structure. Beyond serving as a significant platform contributing to the development of orthopedic science in our country and region, the Congress also fostered the advancement of scientific cooperation between Türkiye and the Turkic World.

Furthermore, the 5th Turkic World Orthopedics and Traumatology Congress, scheduled to take place on 8–12 October 2025 in Shusha, Azerbaijan, has been meticulously prepared, and all organizational arrangements have been finalized. We are confident that this congress will further strengthen scientific cooperation and solidarity among the orthopedic communities of the Turkic World.

In addition, preparations for the scientific program of the National Congress of Bone and Joint Surgery to be held in April 2026 have already commenced. As with our previous events, this congress aims to present the most up-to-date scientific developments and innovative practices to our colleagues.

Launched in April 2025, the Orthopedic Surgery & Trauma journal continues its mission of contributing to both national and international orthopedic communities with the publication of its second issue. The fact that our journal has rapidly become a robust scientific platform at the regional level is a source of great pride for us.

I cordially invite all our colleagues to contribute to this collective endeavor, to support scientific production, and to stand together in advancing our orthopedic community.

Sincerely,

President, Turkish Society of Bone and Joint Surgery

Prof. Dr. Nizamettin Koçkara, MD
